

Solar Collector Systems

What is a solar collector system?

A solar collector system means a device, or combination of devices, structures, or part of a device or structure capable of collecting and distributing solar energy for the purpose of converting into thermal or electric energy.

Regulating appropriate scale for a collector system in:

Urban residential	Commercial
Hamlet	Agriculture
Rural residential	Industrial

Proposed land use regulations will divide solar collector systems into four categories to address scale, location and use:

1. Solar collector panel
2. Solar collector, minor
3. Solar collector, major
4. Solar collector, distribution
